Kelisim: UX/UI Design Brief

Project brief: source material for the user personas, customer journey, sitemap, user flows and final UI/UX mockups

How to use this document

This brief describes the product in enough detail to produce five design artifacts without further questions. Each section matches one artifact and ends with a checklist of what the result should contain. All user data is framed as hypotheses drawn from desk research, so it should be checked against interviews with importers and brokers before the final defense.

Artifact	Section	Expected output
User personas	2	Three persona cards: primary, secondary, B2B
Customer journey	3	Journey map of the primary persona, built in Figma
Sitemap	4	Page tree covering the public site and the personal account
User flows	5	Five scenarios with decision points and error paths
Final mockups (UI/UX)	6	12 desktop screens, 4 mobile screens, UI kit and states

1. Project description

1.1 What the product is

Kelisim (from the Kazakh “келісім”, meaning “agreement”) is a web service for small businesses in Kazakhstan that guides a foreign-trade deal from the contract to the closing of currency control. The entrepreneur fills in one deal form. Kelisim checks the risks, generates a bilingual document package and then reminds the user of upcoming obligations to the bank.

Landing-page slogan: “A contract with your Chinese supplier in 15 minutes: no lawyer, no fines.”

1.2 The problem

- Sole proprietors and small LLPs that import goods from China and Turkey rarely employ a lawyer. An external lawyer charges 50–150k KZT per contract and needs several days.
- Free templates found online ignore Kazakhstan’s currency control rules and are often available in only one language.
- Most losses happen after signing: a missed contract registration number (UCN), a late currency repatriation, or a bank refusing a payment because the counterparty is sanctioned.
- Chinese and Turkish banks scrutinize payments more closely, so a correct document package has become a condition of the deal itself.

1.3 The solution: three modules

Module	What it does	What the user sees
Document generator	Fills lawyer-reviewed templates with data from the deal form and the company profile. A clause builder covers Incoterms 2020 and payment terms.	A preview of the bilingual contract (RU/CN or RU/EN), specification, invoice and packing list, with “Download DOCX / PDF” buttons.
Compliance engine	Deterministic rules: sanctions screening (OFAC, EU, UK), a check of whether a UCN is required, and a repatriation deadline calculation.	A traffic-light risk status (green, yellow, red) with a plain-language explanation and a recommended action.
Obligation tracker	Builds a calendar of deadlines from the deal data and sends reminders in Telegram.	A calendar, a list of upcoming deadlines on the dashboard, and bot messages with a “Done” button.

1.4 MVP scope

In the MVP	Not in the MVP (future versions)
Web app (desktop and mobile browser), RU/EN interface	Mobile app
Templates: supply, agency agreement, services; language pairs RU/EN and RU/CN	Turkish and Kazakh contract languages
Specification, invoice, packing list	E-signature via NCALayer / eGov mobile
Checks: sanctions, UCN, repatriation deadline	HS code selection, customs duty calculation
Personal account, storage, calendar, Telegram bot	Integrations with banks, 1C, the ESF information system
Pricing plans shown on the site (Free / Basic / Pro)	Real payment processing, live lawyer consultations

1.5 Business model (for the pricing screen)

Plan	Price	What is included
Free	0 KZT	1–2 documents a month, basic counterparty check
Basic	about 9–15k KZT / month	Unlimited documents, all templates, storage
Pro	about 25–40k KZT / month	Everything in Basic plus full compliance, the tracker and Telegram reminders
B2B (brokers, accountants)	On request	Several client companies in one account

1.6 Competitors and differentiation

Lawyers are expensive and slow. Legal databases (Paragraph, Zakon.kz) offer templates but no logic or checks. Customs declarants handle customs, not the contract or currency control. Kelisim combines the document, the risk check and deadline tracking in one place, with Kazakhstan-specific rules and Chinese-language support. This difference should be obvious on the landing page and during onboarding.

2. User personas

Three personas are needed. The primary persona drives interface decisions, the secondary one tests whether the product works for larger deals, and the B2B persona sets requirements for working with several companies. The recommended card structure is: photo or avatar, name and age, role and business, quote, goals, frustrations, behavior and tech, Kelisim scenario, and rating scales.

Persona 1 (primary): Aigerim, online seller

Field	Details
Profile	31, Almaty. Sole proprietor on the simplified tax regime. Sells children's clothing and accessories on Kaspi and Wildberries. Monthly turnover of 3–5M KZT, 2 employees.
Foreign trade	Buys in Guangzhou through 1688 and a buyer friend, 1–2 shipments a month. Draws up contracts from a template shared in a sellers' WhatsApp chat. Does not speak Chinese.
Quote	"I know my products and the marketplaces, not currency control. The bank returned my payment and for a week I had no idea why."
Goals	Produce a correct contract quickly so the bank lets the payment through. Stop paying a lawyer for every shipment. Avoid fines.
Frustrations	Does not know whether a UCN is needed or what the deadlines are. Fears her template is "wrong". Has no time to study the law. Her supplier asks for a contract in Chinese.
Behavior and tech	Does everything from her phone but prepares documents on a laptop. Active in Telegram and Instagram, uses Kaspi Business and eGov mobile. Trusts recommendations in seller chats.
Kelisim scenario	Finds Kelisim through friends and colleagues, signs up on the Free plan and makes her first RU/CN contract. Gets a yellow status: a UCN is required. Obtains it at the bank, then upgrades to the Basic plan.
Scales (1–5)	Digital literacy 4 · Legal knowledge 1 · Price sensitivity 4 · Urgency 5

Persona 2 (secondary): Yerzhan, director of a wholesale company

Field	Details
Profile	42, Astana. Director of an LLP that wholesales construction materials and household chemicals from Turkey and China. 15 employees; has an accountant but no lawyer.
Foreign trade	Large contracts, regularly above the threshold that requires contract registration. Pays through Halyk and Freedom. Has been fined before for late repatriation.
Quote	"I don't need a pretty contract. I need to be sure no one shows up with a fine six months from now."
Goals	Keep the deadlines of all contracts under control. Check new suppliers before paying. Cut spending on an external lawyer.
Frustrations	Repatriation deadlines sit in the accountant's Excel file and get forgotten. A new supplier may turn out to be on a sanctions list. Documents are scattered across email.
Behavior and tech	Works on a laptop, decides quickly and reads only the bottom line. Values reports and at-a-glance statuses. Willing to pay for reliability.
Kelisim scenario	Takes the Pro plan right away and sets up 5 active contracts. Connects the Telegram bot for himself and his accountant, and checks every new counterparty before paying.
Scales (1–5)	Digital literacy 3 · Legal knowledge 3 · Price sensitivity 2 · Importance of control 5

Persona 3 (B2B): Dinara, outsourced accountant

Field	Details
Profile	36, Karaganda. Runs her own three-person accounting firm with about 20 clients, 8 of whom import goods.
Foreign trade	Prepares bank documents for clients, monitors their deadlines and answers banks' currency control inquiries.
Quote	"I have 8 importers, each with their own deadlines. I can't keep track of them all by myself."
Goals	See all clients' deadlines in one window. Produce standard documents quickly. Sell clients an additional service.
Frustrations	Clients send data late and with errors. Switching between companies eats up time. She is accountable for her clients' missed deadlines.
Behavior and tech	At the computer all day, working in 1C, Excel and the taxpayer account. Needs tables, filters and export.
Kelisim scenario	B2B plan with a company switcher in the header and a shared deadline calendar across all clients. She sends each client a link to the deal form.
Scales (1–5)	Digital literacy 5 · Legal knowledge 4 · Price sensitivity 3 · Workload 5

Persona checklist: every persona has a quote, goals, frustrations, behavior and a Kelisim scenario; the primary persona is clearly marked; the frustrations map to the product's three modules.

3. Customer journey

We built the customer journey map in Figma for Aigerim, the primary persona, following her first deal through Kelisim across seven stages, from becoming aware of the problem to ongoing support and repeat deals. The map includes an emotion curve that is lowest at the first stage and highest at stages 6 and 7. Its two moments of truth are stage 3 (trust in the legal validity of the documents) and stage 5 (clarity of the check result), which is where the mockups need the strongest design decisions.

4. Sitemap

The site has two zones: a public area (no login) and the personal account. Main navigation in the account is a left sidebar on desktop and a bottom bar on mobile. The tree below uses numbering to show nesting depth.

4.1 Public area

Page	Content
1. Home (landing page)	Offer, three modules, how it works (3 steps), sample document, trust block, short pricing, FAQ, CTA "Create a contract for free"
1.1 How it works	Detailed description of the deal form, the check and the tracker, with screenshots
1.2 Pricing	Free / Basic / Pro / B2B with a comparison table
1.3 For brokers and accountants	B2B offer and an application form
1.4 Log in	Email or phone, password, "forgot password"
1.5 Sign up	Email or phone, password, consent to the terms
1.6 Legal information	Terms of use, disclaimer, privacy policy

4.2 Personal account

Page	Content
2. Onboarding	2.1 Company details (BIN, autofill) → 2.2 Bank and payment details → 2.3 Telegram connection (can be skipped)
3. Dashboard	“New deal” button, upcoming deadlines, active deals with statuses, next-step hint
4. Deals	4.1 Deal list (filters: status, risk, counterparty)
4.2 New deal (wizard)	Step 1 Contract type and languages → Step 2 Counterparty → Step 3 Goods and amount → Step 4 Terms (Incoterms, payment, dates) → Check → Document package
4.3 Deal page	Tabs: Overview (status, risk) · Documents · Check · Deadlines · History
5. Documents	Archive of all documents, search, download
6. Counterparties	List; counterparty page with the latest check result and “Check again”
7. Calendar	Month and list views, filter by deal, “done” marker
8. Company profile	Company and bank details, signatory. For B2B: list of client companies
9. Settings	9.1 Notifications and Telegram · 9.2 Interface language · 9.3 Plan · 9.4 Security
10. Help	Glossary (UCN, repatriation, Incoterms), FAQ, contact support

Global elements of the account: a header with search, a notification bell, a language switcher and an avatar; for B2B, also a company switcher.

Sitemap checklist: two zones, no more than three nesting levels, and the deal wizard shown as a sequence of steps.

5. User flows

Five scenarios need to be drawn. Scenario 5.2 is the main one and should be the most detailed. Notation: a rectangle is a screen or action, a diamond is a decision by the system or the user, an oval is a start or end, and a dashed line is a return or an error.

5.1 Registration and onboarding

Step	Screen / action	Decisions, branches, errors
1	Landing page → “Create a contract for free”	
2	Sign-up: email or phone, password	Email already registered → suggest logging in
3	BIN entry	Found → company details are filled in and the user confirms. Not found → manual entry
4	Bank and payment details	
5	Connect Telegram	“Skip” → a reminder appears on the dashboard later
6	Dashboard in its empty state with a “New deal” CTA	

5.2 Creating a deal (main scenario)

Step	Screen / action	Decisions, branches, errors
1	Dashboard → “New deal”	Free plan and limit used up → pricing screen
2	Step 1: contract type, language pair	
3	Step 2: counterparty	Choose a saved one or enter a new one
4	Step 3: goods, quantity, amount, currency	Validation error → the field is highlighted with a hint
5	Step 4: Incoterms, payment terms, dates	
6	Check screen (3–5 seconds of loading, the three checks run one after another)	
7	Result: traffic light	Red → explanation with the buttons “Edit data” (back to steps 2–4) and “Contact support”. Yellow → list of warnings and actions, “Continue”. Green → “Continue”
8	Document package preview	“Edit terms” → clause panel → the package is rebuilt
9	Download DOCX / PDF	Deal saved, deadlines added to the calendar
10	Success screen: “Deadlines added. Connect Telegram?”	Already connected → go to the deal page

5.3 Responding to a reminder

Step	Screen / action	Decisions, branches, errors
1	Telegram bot: “7 days left until the repatriation deadline for deal No. …”	
2	Buttons “Done” / “Open deal” / “Remind me tomorrow”	“Open” → deal page, Deadlines tab
3	Marking as done	Optionally upload proof (bank statement, customs declaration)
4	All deadlines completed → status “Closed”	Deadline missed → red marker on the dashboard and a repeat notification

5.4 Counterparty check

Step	Screen / action	Decisions, branches, errors
1	Counterparties → “Add” or “Check again”	
2	Enter name, country, address	
3	Screening result	Match → red status showing the source list. No match → green status with the check date

5.5 Repeat deal

Step	Screen / action	Decisions, branches, errors
1	Page of a previous deal → “Create similar”	
2	The wizard opens with fields pre-filled	The user changes only the amount and dates
3	Continue as in 5.2, starting from step 6	

User flow checklist: every scenario has a start and an end, every diamond has at least two branches, errors and empty states are drawn, and the main scenario gets a sheet of its own.

6. Final mockups (UI and UX)

6.1 Screen list

#	Screen	Key elements
1	Landing page	Hero with the offer and CTA, preview of a bilingual contract, three modules, “How it works” in 3 steps, trust block, pricing, FAQ
2	Sign-up	Short form, phone login, link to the terms
3	Onboarding	Progress 1/3, BIN field with autofill, “We found your company” card
4	Dashboard	“New deal” CTA, “Upcoming deadlines” widget, table of active deals with status badges, empty state
5	Deal wizard, steps 1–4	Stepper on top, one topic per step, “?” hints, Back / Next buttons, draft autosave
6	Check screen	Animation of the three checks, then the traffic light
7	Result: red / yellow / green	Three screen variants: headline, plain-language explanation, what to do, action buttons
8	Package preview	Document list on the left, the document in the center with a RU / CN / bilingual switcher, clause panel on the right, “Download”
9	Deal page	Header (counterparty, amount, risk, status) and tabs Overview / Documents / Check / Deadlines / History
10	Calendar	Month and list views, color by deadline type, “done” marker
11	Counterparties	Table with check result and date, counterparty page
12	Settings and plans	Telegram connection (QR code and button), plan comparison
M1–M4	Mobile: dashboard, wizard step, check result, calendar	Bottom navigation, full-screen steps, large buttons
T	Telegram bot	2–3 example messages with inline buttons

6.2 UX principles

- **One input, many outputs.** Company and counterparty data is entered once and reused automatically.
- **Plain language.** Legal terms come with a “what this means” hint. For example: “A UCN is the number the bank assigns to a contract. Without it, payments may be delayed.”
- **Status always visible.** Every deal has a risk badge and a stage badge, and the next step is suggested on the dashboard.
- **Trust.** A “Template reviewed by a lawyer” label, the template version date, and a small disclaimer next to the download button.
- **Forgiving of mistakes.** Draft autosave, “Back” without losing data, and clear error messages next to the fields.
- **Color is never the only signal.** Traffic-light statuses are duplicated by an icon and text.

6.3 Visual style (UI kit)

Element	Recommendation
Character	Reliable, calm, fintech-like, without legal heaviness. Plenty of white space, cards, soft shadows or thin outlines
Primary color	Indigo #3C3489 (buttons, active elements); light background #EEEDFE for highlights
Accent	Teal #0F6E56 / #E1F5EE for the tracker and successful actions
Statuses	Green #3B6D11, yellow #854F0B, red #A32D2D; backgrounds #EAF3DE, #FAEEDA, #FCEBEB
Neutrals	Text #2C2C2A, secondary text #5F5E5A, borders #D3D1C7, page background #FAFAF7
Typeface	Inter or Manrope (both support Cyrillic and Kazakh letters). H1 32, H2 24, H3 18, body 16, captions 13
Grid	Desktop 1440 px, 12 columns, 80 px margins; mobile 375 px, 4 columns, 16 px margins; 8 px spacing step
Components	Buttons (primary, secondary, ghost), input fields with hint and error, stepper, status badges, deal cards, table, tabs, toasts, modal window, empty states
Icons	Line icons from a single set (Tabler, Lucide or Phosphor)
Logo	The word “Kelisim” plus a symbol (for example, two crossing lines representing an agreement)

6.4 States to show

Besides the ideal-case mockups, key screens need their other states: an empty dashboard for a new user, the check loading, a validation error in the wizard, a red check result, an overdue deadline in the calendar, and an exhausted Free-plan limit. This shows depth of UX work and is usually valued at the defense.

6.5 Sample copy for the mockups

Place	Text
Hero	“A contract with your Chinese supplier in 15 minutes” / “Bilingual documents, risk checks and reminders for currency control deadlines”
Empty dashboard	“Your deals will appear here. Create the first one: it takes about 15 minutes”
Yellow status	“A contract registration number (UCN) is required. Obtain it at your bank before the first payment, otherwise the payment may be delayed”
Red status	“The counterparty was found on an EU sanctions list. The payment will most likely be blocked. Check the data or choose another supplier”
Green status	“No risks found. You can generate the documents”
Telegram	“7 days left until the repatriation deadline for the contract with Guangzhou Textile Co. Amount: 18,400 USD”

Mockup checklist: 12 desktop and 4 mobile screens, one UI kit, three variants of the check result, empty and error states, and a clickable Figma prototype of the main scenario 5.2.

7. Pre-submission checks

- The personas and the customer journey rely on the same frustrations, and the mockups address them.
- Every page in the sitemap appears in at least one user flow, and vice versa.
- Screen names match across all artifacts (sitemap, flows, mockups).
- Interface copy is in one language and the terms are consistent: “deal”, “document package”, “check”, “deadlines”.
- Persona data is marked as hypotheses or confirmed by interview quotes.
